Much of what is known about axonal function comes from studying the squids giant axon, an Thu, 19 Apr 2018 20:35:00 GMT Human Physiology/The Nervous System - Saylor Academy - Central nervous system: The spinal cord and the brain make up the central nervous system. Peripheral nervous system: On their own, the nerves that run throughout our body are called the peripheral nervous system. They relay information from our brain and it usually works through our spinal cord to the body, and back again. Autonomic nervous system: This is part of the peripheral nervous system. Wed, 18 Apr 2018 22:24:00 GMT Understanding the Nervous System - Microsoft - Neurons are the building blocks of the nervous system. Each neuron has a cell body with extensions called dendrites and an axon. Dendrites are the receiving part of a neuron. The signal received at the dendrite is transmitted toward the cell body of the neuron in the form of an electrical impulse.
